

SECURE WEB GATEWAY

Fast, compliant and secure access to the Internet.

An integrated and important module of Cloud Gateway, the Secure Web Gateway allows you to quickly and efficiently configure filters to protect and control against unwanted Internet traffic, and enforces corporate and regulatory policy compliance.

By pointing all of your organisation's Internet traffic through the Secure Web Gateway, it will: inspect each data packet sent and received, ensuring the requested content is safe and compliant; forward approved traffic to its eventual destination; and log the actions taken within the Cloud Gateway Portal.

Secure Web Gateway is fully integrated with Cloud Gateway's security features and delivers the following benefits to your organisation:

Understand user behaviour

Monitor and analyse traffic trends throughout your organisation in real time, gaining valuable insights.

Allowed/Denied web filters

Control which websites are permitted and which are not, protecting business and integrity, as well as productivity.

Threat intelligence

Receive real-time reporting and alerts delivered to you through the Cloud Gateway Portal.

Cloud Gateway enables you to transform your network at scale and facilitate your journey to the Cloud at a pace suited to your requirements. It lets you do this safe in the knowledge that the underlying infrastructure is proactively managed and supported 24/7 by an industry leading SLA

tailored to address every eventuality. With dedicated service integration and ongoing consultancy delivered as standard, Cloud Gateway helps you design, deploy and adapt to the changing conditions of your Network, at a scale and cost efficiency aligned to your own strategic initiatives.
