PRISM

Secure Access Service Edge (SASE)

Improve performance, reduce cost and complexity and strengthen security

CONNECT, PROTECT, INSPECT.

Flexible networking and security to rapidly and securely connect you to multiple cloud service providers, the HSCN, the PSN and the internet.

PRISM

Cloud Gateway's flexible, cloud-native SASE solution enables organisations of any size to choose the tools they need to improve performance, reduce cost and complexity and strengthen security - all delivered as a service with full visibility.

PRISM secures all remote access, internet and network traffic, with government-grade security, rapid deployment and flexibility. Future-proof your network and your business.

Performance. Cost saving. Ease of management. With PRISM you can gain them all without having to let go of a thing. Now that really is SASE.

- Reduce cost and complexity
- Improve network performance
- Faster time to market for a competitive edge
- Strengthen security
- Modernise legacy systems
- Start small and scale
- Government-grade security
- Full visibility and control

Get Connected

PRISM can operate on a 'Bring Your Own Network' basis to avoid CAPEX costs for any additional hardware - but if you would like us to take care of that for you, that's ok too. PRISM connects and secures your ecosystem, acting as the beating heart of your network. As a cloud-centric SASE solution, PRISM provides the security and performance you need today, for the cloud services you need tomorrow.

You can connect to PRISM via any public or private connectivity method, it is completely agnostic to suit your business needs. Seamlessly and securely bring together all of your network endpoints for full visibility and control of your network.

PRISM - The UK's First SASE Solution.

Connect, Protect, Inspect.

Welcome to the three pillars of the PRISM platform: Connect, Protect, Inspect. These core pillars are essential to building a Secure Access Service Edge (SASE) solution, giving you more flexibility, visibility and control of your network.

Connect

The Connect pillar provides your organisation with a full suite of network connectivity capabilities, depending on your needs, to bring your entire ecosystem together.

Protect

The Protect pillar provides your organisation with a set of security tools, so you can choose how you want to protect your network with granular control over policies and governance.

Inspect

The Inspect pillar gives you full visibility of your network traffic and security configurations from a single portal, allowing you to monitor the network and analyse key metrics.

SASE, delivered as a service.
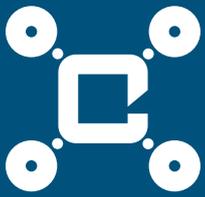

Connect

Select your base connectivity and bandwidth needs

Choose the network connectivity capabilities that you need, depending on your business requirements, to bring your entire ecosystem together. Establishing a connection to any cloud environment can be done within minutes with Cloud Gateway doing the heavy lifting. Get network connectivity which is secure, with predictable performance. With your network connectivity taken care of, your IT team can concentrate on more strategic projects, adding greater value to the business.
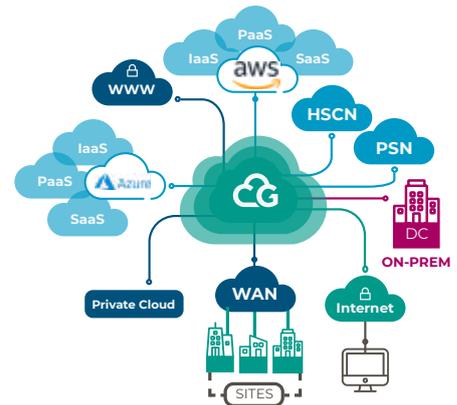

| VPN Site connectivity | Cloud connectivity | Data Centre Cross Connect | Private MPLS |

| 100 Mbps | 200 Mbps | 300 Mbps | 400 Mbps | 500 Mbps | 1 Gbps | 2 Gbps | 5 Gbps | 10 Gbps |

Select from additional connectivity options as required

Secure Remote Access

Remote access connects remote users to your network from any device via the internet, with the same level of security you would expect from an enterprise site. With remote access your workforce can operate securely, from anywhere.

| 50 users | 100 users | 250 users | 500+ users |

HSCN Connectivity

Available at bandwidth levels of 10Mbps upwards. For more information about connectivity to the Health and Social Care Network (HSCN), please get in contact.

PSN Connectivity

Available at bandwidth levels of 10Mbps upwards. Requires advanced security due to regulatory compliance. For more information about Public Services Network (PSN) connectivity, please get in contact.

Security options

Depending on your needs traffic to/from the internet, your cloud connected environments, or your connected enterprise sites, is forwarded through a Secure Enforcement Core. This means your security policy, posture and governance will remain in place as your corporate network changes.

You can add more clouds, sites and users to the network, safe in the knowledge that PRISM will continue to apply your security policy for you.

The policy itself can be as granular or as high level as you wish, depending on how you need to manage your various traffic flows, and the sensitivity of your workloads. Security is not just about protection, but about full visibility through logging and auditing.

Feed granular detail about your network activity into the telemetry platform, integrate with your existing SIEM / SOC, and provide insight into how your network is performing.
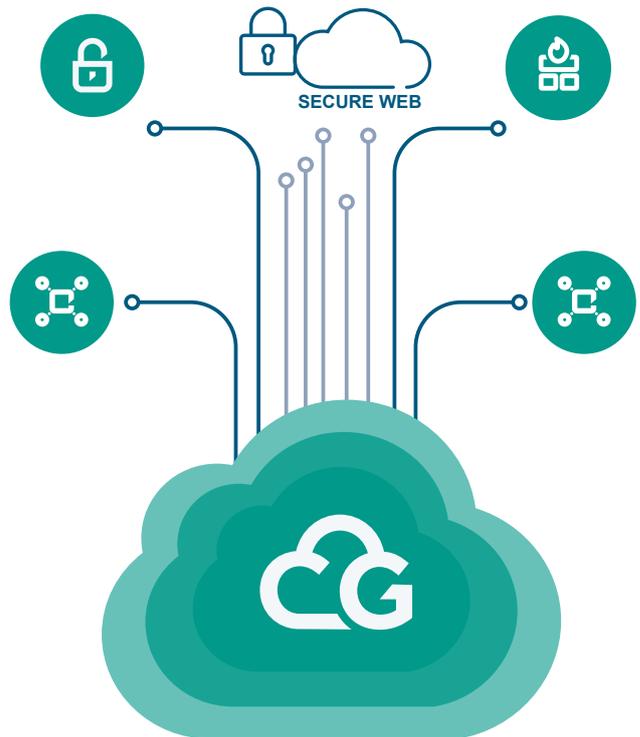

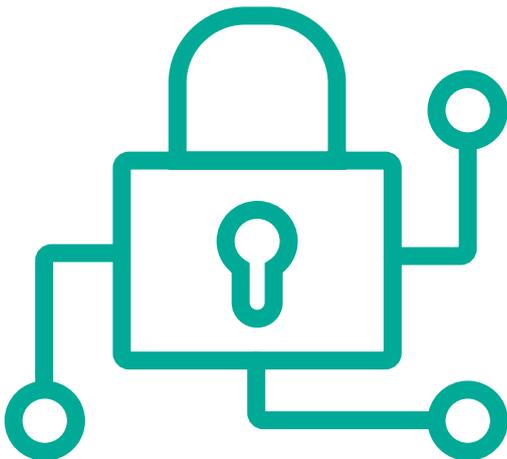

Amending Security Policy

As part of your managed service, Cloud Gateway become the custodians of your security policy, but you have full control over the access and protection you require and desire.

We will work with you to set your initial security policy when you enter live service, through workshop sessions and conference calls, as appropriate. Amendments to security policies are done via a simple change request, submitted to our service team.

SECURE WEB

Let's talk Security.

What security capabilities might you need?

If you need security functions, you have the choice of the Foundation Security or Firewall-as-a-Service (FWaaS) modules, Secure Web Gateway or Web Application Firewall (WAF), depending on your business needs and data sensivity. The team at Cloud Gateway can make recommendations as to the most appropriate tools your business needs in order to effectively protect your network.

Foundation Security

Cloud Gateway applies security from the heart of the network, so any traffic is sanitised and checked without exception.

The Layer 3/Layer 4 firewall capabilities in the Foundation Security module will identify and block network traffic that does not conform to the standards you set.

Ensure that your network is secure, and that security policies can be applied across the network consistently.

Get a range of security options with the FWaaS module, which are all cloud-native, allowing you to quickly adapt, scale and respond in response to changing threats. The PRISM platform utilises best-of-breed security software to deliver you industry-leading security services through a single view, now and into the future.

Firewall-as-a-Service (FWaaS)

Secure Web Gateway

URL Filtering
DNS Inspection
Application Control
Proxy Services
Deep Packet Inspection (DPI)

Web Application Firewall (WAF)

Inspect

Full network visibility

Mycloudgateway.co.uk shows your network overview at a glance, in a simple, intuitive display. Accessible via any web interface, it allows you to keep track of your network performance, utilisation and traffic flow overview.

Mycloudgateway.co.uk contains functionality to raise a support case with the Cloud Gateway service team, as well as keep track of existing cases.

All customers receive access to the mycloudgateway.co.uk, which provides visibility of your network and security ecosystem.

Dashboard
Service status
Licence utilisation data
Bandwidth usage
Firewall policy information if applicable
Support / ticket management

Additional monitoring and analytics
Gain access to a sophisticated monitoring and analytics module, which allows you to drill down into more detail about your network traffic events.

SIEM / SOC Integration

A 'Protect' component is required to activate SIEM / SOC Integration

Inclusive log storage

A 'Protect' component is required to store logs

30 days included

Extended log storage

Available on request

Reduce network complexity.

With full visibility and a fully managed end to end service, you can rest assured that your network and security are in good hands while you concentrate on strategic projects to accelerate business growth and transformation.

Start your SASE journey today.

Key Benefits

- End-to-end service

- Endless connectivity methods

- Born in the cloud - No hardware required

- PSN and HSCN accredited

- Seamless integration: Security & connectivity

- Underpinned by broad networking expertise

- NCSC and CNSP compliant

- Security standards and accreditations

- Managed Service, 24hr support
